

INTRODUCTION TO CTF workshop

Suggested program and topics

The introduction to CTF workshop is designed for participant's who have little or no understanding of Controlled Traffic Farming (CTF) systems. It covers the why and what of CTF.

TOPICS include:

1. What is CTF (the fundamental concepts/benefits)
2. Compaction and its affect on yield, soil water and timeliness
3. Agronomy requirements (working in with zero-till, what can you expect in un-compacted soils)
4. System benefits, including yield improvements and efficiency gains.

SELLING POINTS

- The workshop will give you understanding into CTF and why it has been a success for so many farmers across Australia.
- CTF works as well on 500ac as it does on 20,000ac
- CTF does NOT necessarily mean spending big \$\$ on new machinery.
- There are several key factors to a successful CTF system which you need to consider
- What are the shortcuts you can make to avoid costly machinery mistakes?
- Learn from the extensive experience of the team that led CTF in the mid 1990's

AGENDA (Time 9am to 4pm)

1. Why do CTF?
2. What is CTF?
3. What are the components of a successful CTF system?
4. Machinery, Agronomy, Layouts of CTF
5. GPS Guidance - do you need it?
6. Standard machinery widths and why we need them
7. Farm visit (if required)

COST: \$300/head + GST for a group of 10 people, maximum 15 (2 consultants). Additional travel costs may apply to areas with significant travel. A series of workshops in a district will attract a discount.
